

Removing Files From a File Set

As an example you may have some images files in sets that are used for specific galleries. To delete images that are in those sets do the following:

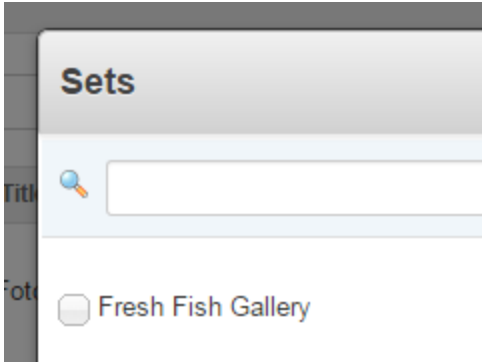

- Go to the Dashboard
- Click on File Manage from under FILES
- Click on I Set(s) and select the set you want to work with.

- Left click on the image you want to remove and click Sets.

- Untick from the set, optionally you can create a new set and add it to that at the same time.

- Click update.
